Food Safety Catalogue - 2012

Table of contents

General	2
Food safety I: Highly Purified Natural Toxins for Food Analysis	4
Food Safety II: Food Contaminants	9
Food safety III: Food Colour and Aroma.....	15
Isopropylthioxanthone (ITX).....	19
Desphenylchloridazon-15N2.....	20
PCBs	21
PBDEs, PBBs, Flame Retardants, Halobenzenes and Phenols	27
PCNs, PBNs and HaloPAHs.....	35
SCCP/PCA, Chloroalkanes	37
PFCs incl. PAPs	40
Plasticizers - phthalates and adipates	44
Priority PAHs	50
PAH metabolites: Hydroxy, keto, nitro, amino and glucuronide derivates.....	54
Nitrosamines	58
Allergens.....	60
3-MCPD esters	62
Glycidyl fatty acid esters	64
Melamine	65

BMF 1 - Chiron - A world class SME

Chiron was established in 1983 by Dr. Jon Eigill Johansen in Trondheim, Norway and started with the development and production of biomarkers for use in search for oil in the North Sea.

Today we deliver a wide range of reference materials for analytical use in the fields of

- ◊ Environmental analysis
- ◊ Petroleum analysis
- ◊ Food Safety analysis
- ◊ Pharmaceutical and forensic analysis
- ◊ Custom syntheses and custom mixes following our customer's request

Trondheim - from the bridge at Bakkelandet*

Reference materials (RM) play an important role as they build the link between measurement results in the laboratory and international recognized standards in the traceability chain. Our standards are made according to the general requirements of ISO 9001. In 2011 we started to implement ISO 17025 and ISO guides 30-35.

Your benefits using our standards include:

- ◊ Fast turnover time due to excellent service.
- ◊ Guaranteed high and consistent quality.
- ◊ Sufficient capacity to serve the market, and bulk quantities available on request.
- ◊ Custom solutions on request.

*<http://www.trondheim.no/multimedia.ap?id=1115017159>, © Carl-Erik Erikson

Chiron - A world class SME

Food analysis:

- ◊ POPs like PCBs, PBDEs, Dioxins, PCAs, PFCs, PAPs, Persistent pesticides
- ◊ Phthalates
- ◊ PAHs, BTEX
- ◊ Pharmaceuticals
- ◊ Mycotoxins /Algal toxins
- ◊ Food packaging contaminants like plasticizers
- ◊ Contaminants formed during food processing like Glycidyl and MCPD fatty acid esters, acryamide, PAHs
- ◊ Pharma /Agro drugs
- ◊ Allergens
- ◊ Food constituents

Petroleum analysis:

- ◊ Hopanes (C30 Hopanes, Norhopanes, Rearranged hopanes, Methylhopanes, Homohopanes and gammacerane) and Steranes
- ◊ Priority PAHs and F-PAHs, large PAHs and metabolites
- ◊ GC-IRMS (12C / 13C-ratio)
- ◊ Diamondoids and Adamantanes
- ◊ Oil-in-water and Produced water analysis (Phenol and phenoxyethoxylates, NPDs)
- ◊ Hydrocarbons
- ◊ PIONA, PONA and PNA mixtures
- ◊ Sulfur and Nitrogen standards
- ◊ Phosphorous standards
- ◊ Organophosphates
- ◊ Petrochemical products

Environmental analysis:

- ◊ POPs like PCBs, PBDEs, Dioxins, PCAs, PFCs, PAPs, Persistent pesticides
- ◊ Organotin
- ◊ Nonylphenol ethoxylates
- ◊ Alkylphenols
- ◊ Phthalates
- ◊ PAHs, BTEX
- ◊ Hydrocarbons
- ◊ Biomarkers
- ◊ Pharmaceuticals

Pharmaceutical and forensic analysis:

- ◊ Metabolites
- ◊ Intermediates
- ◊ Impurities
- ◊ Drugs of Abuse:
 - SPICE®: (various JWHs, AMs, HUs)
 - Designer drugs
 - Opioids
 - Cannabinoids
 - Cocains
 - Amphetamines
 - Benzodiazepines

BMF 29 - Food Safety I

Highly Purified Natural Toxins for Food Analysis

Chiron has built up a strong track record of supplying new reference standards during the past 30 years of operation. We are proud to announce our extended offer of Highly Purified Natural Toxins for Food Analysis:

- ◊ Mycotoxins
- ◊ Plant toxins
- ◊ Marine toxins

The basis of a good analytical method is the availability of appropriate standards of defined purity and concentration.

Our mission is to market highly purified toxin calibrates in crystalline as well as standardized solutions for chemical analysis, including internal standards.

Your benefits using our standards include:

- ◊ Fast turnover time due to excellent service.
- ◊ Guaranteed high and consistent quality.
- ◊ Sufficient capacity to serve the market, and bulk quantities available on request.
- ◊ Custom solutions on request.

Reference materials (RM) play an important role as they build the link between measurement results in the laboratory and international recognized standards in the traceability chain. Our standards are made according to the general requirements of ISO 9001. In 2011 we started to implement ISO 17025 and ISO guides 30-35.

Mycotoxins

Calibrant solutions, Neat standards, Matrix reference materials.

2240.17-100-AN*	3-Acetyldeoxynivalenol	3-AcDON	100µg/mL	acetonitrile	1mL

3803-100G	Maize fluor, zearalenone		60 +/- 9 µg/kg		100g

* Also delivered in 5mL and 5 MG neat.

* Also delivered in 5 mL and 5 MG / 10 MG neat.

Mycotoxin calibrant mixtures

S-4296-ASS-AN/ S-4296-ASS-5AN	MIX 1 Aflatoxins mixture; AFB1&AFG1,AFB2&AFG2; 2 µg/mL; 0.5 µg/mL	Mixture in acetonitrile, available in 1 mL and 5 mL
S-4297-100-AN/ S-4297-100-5AN	MIX 2 B-Trichothecenes mixture, DON, NIV, 3AcDON & 15-DON;	100 µg/mL each in acetonitrile, available in 1 mL and 5 mL
S-4298-50-MX/ S-4298-50-5MX	MIX 3 Fumonisins mixture, FB1&FB2	50 µg/mL in acetonitrile/water, available in 1 mL and 5 mL
S-4531-10-AN/ S-4531-10-5AN	MIX 4 A+B-Trichothecenes+Zearalenone 3AcDON, DON, NIV, FusX, HT-2, T-2, DAS, ZON	10 µg/mL each in acetonitrile, available in 1 mL and 5 mL
S-4532-025-AN/ S-4532-025-6AN	MIX 5 Aflatoxins mixture, AFB1&AFG1;AFB2&AFG2	0.25 µg/mL each in acetonitrile, available in 1 mL and 6 mL
S-4533-100-5dried	MIX 6 Ergotalkaloids mixture of Ergocornine, Er-gocrinidine, Ergocryptine,Ergometrine, Ergosine, Ergo-tamine	100 µg/mL, 5 mL dried down

Plant and other natural toxins in

	<i>Toxic pyrrolizidine alkaloids</i>		
3914.16-100-ME	Crotaline	Monocrotaline	100 µg/mL in methanol, 1 mL
8021.16-100-ME	Heliotrine		100 µg/mL in methanol, 1 mL
8035.21-100-ME	Lasiocarpine		100 µg/mL in methanol, 1 mL
3817.18-100-ME	Retrorcine		100 µg/mL in methanol, 1 mL
3818.18-100-ME	Senecionine		100 µg/mL in methanol, 1 mL
3819.18-100-ME	Seneciphylline		100 µg/mL in methanol, 1 mL
	<i>Solanine</i>		
3865.45-2MG	Solanine		2 mg neat
3865.45-100-AC	Solanine		100 µg/mL in acetonitrile, 1 mL
3866.27-10MG	Solanidine		10 mg neat
	<i>Coumarin</i>		
3867.9-K-ME	Coumarin		1000 µg/mL in methanol, 1 mL
3868.9-K-ME	Coumarin-d4		1000 µg/mL in methanol, 1 mL
8941.10-100MG	Coniferaldehyde		100 mg neat
3869.9-1ML	Cinnamaldehyde		1 mL neat
3870.7-1ML	Benzaldehyde		1 mL neat
3900.10-1ML	Eugenol		1 mL neat
3872.6-KIT	Coumarin Kit		One of each above

Marine toxins

	Algae and shellfish toxins		
	<i>Amnesic shellfish (ASP) toxins</i>		
3692.15-100-05MX	Domoic acid	CRM-DA-e	99.4 µM in acetonitrile/water, 0.5 mL
3693.15-40-8G	<i>Mytilus edulis</i> , homogenized (Domoic acid)	CRM-ASP-Mus-c	41 µg/g, homogenized mussel, 8 g
3694-100-15G	<i>Mytilus edulis</i> , homogenized (Domoic acid)	RM-ASP-Mus	98 µg/g, homogenized mussel, 15 g
	<i>Diarrhetic shellfish (DSP) and lipophilic toxins</i>		
3695.44-20-05ME	Okadaic acid	CRM-OA-c	17.7 µM in methanol, 0.5 mL
3696.44-10-4G	Blue mussel, homogenized (Okadaic acid)	CRM-DSP-Mus-b	10.1 µg/g, homogenized blend, 4 g
3697.45-100UG	Dinophysis toxin 1		100 µg neat
3698.X-10-05ME	Pectenotoxin	CRM-PTX2	10.0 µM in methanol, 0.5 mL
3700.42-10-05ME	13-Desmethyl spirolide C	CRM-SPX1	10.2 µM in methanol, 0.5 mL
3701.32-10-05ME	Gymnodimine	CRM-GYM	9.9 µM in methanol, 0.5 mL
3702.55-5-05ME	Yessotoxin	CRM-YTX	4.6 µM in methanol, 0.5 mL
8202.X-1-05ME	Azaspirazole 1	CRM-AZA1	1.47 µM/L in methanol, 0.5 mL
9884.X-1-05ME	Azaspirazole 2	CRM-AZA2	1.5 µmol/L in methanol, 0.5 mL
9885.X-1-05ME	Azaspirazole 3	CRM-AZA3	1.25 µmol/L in methanol, 0.5 mL
	<i>Paralytic shellfish (PSP) toxins</i>		
3703.10-60-05HC	Saxitoxin dihydrochloride	CRM-STX-e	65 µM in 10 ⁻³ M HCl, 0.5 mL
9976.10-65-05HC	Neosaxitoxin	CRM-NEO-b	65 µM in 10-3 M HCl, 0.5 mL
3705.-60-05HC	Descarbamoylsaxitoxin	CRM-dcSTX	62 µM in 10-3 M HCl, 0.5 mL
3706.10-05HC	Gonyautoxin-1 and -4	CRM-GTX1&4-b	106+35 µM HCl/acetic acid, 0.5 mL
3707.10-05HC	Gonyautoxin-2 and -3	CRM-GTX2&3-b	118+39 µM in HCl/acetic acid, 0.5 mL
3708.10-60-05HC	Gonyautoxin-5 (akaB1)	CRM-GTX5-b	65 µM in HCl(aq) pH5, 0.5 mL
3710.X-30-05W	Descarbamoylneosaxitoxin	CRM-dcNEO	30 µM in water
3711.X-140-05HC	N-Sulfocarbamoyl-gonyautoxin-2 and -3	CRM-C1&2	114+35 µM in HCl(aq) pH5, 0.5 mL
	<i>Freshwater / cyanobacterial toxins</i>		
3712.15-30-05W	Cylindrospermopsin	CRM-CYN	30 µM in water, 0.5 mL
2552.10-1MG	(+/-)-Anatoxin A, fumarate		1 mg neat

BMF 30 - Food Safety II

Contaminants from food processing and packaging

Chiron has built up a strong track record of supplying new reference standards during the past 30 years of operation. We are proud to announce our offer of Contaminants and Impurities for Food Analysis. In this leaflet you will find analytes within the following categories:

Toxic compounds formed during food processing

3-MCPD and Glycidyl fatty acid ester, Acrylamide, Furan, Stigmastadienes, PAH's

Food packaging contaminants

Plasticizers, 2-Ethylhexanoic acid, SEM, Ethyl carbamate, ITX

Environmental contaminants

PFOS / PFC's, Pesticides and other POPs

Toxic compounds formed during food processing

3-Monochloropropanediol (3-MCPD) and glycidyl fatty acid esters are formed during food processing e.g. deodorization of vegetable oil. They are metabolised in the human body to toxic substances like 3-MCPD.

Chiron No.	Product	Description
	3-MCPD	
3873.3-K-ME	3-Chloro-1,2-propanediol	3-MCPD
8607.3-K-ME	(R)-(-)-3-Chloro-1,2-propanediol	(R)-3-MCPD
8608.3-K-ME	(S)-(+)3-Chloro-1,2-propanediol	(S)-3-MCPD
3874.3-K-ME	3-Chloro-1,2-propene-d5-diol	3-MCPD-d5
	3-MCPD-1-monoesters	
8949.19-100-ME	3-Chloro-1,2-propandiol-1-monopalmitate	3-MCPD-1-16:0
8950.19-100-ME	3-Chloro-1,2-propandiol-1-monopalmitoleate	3-MCPD-1-16:1 (9-cis)
8951.21-100-ME	3-Chloro-1,2-propandiol-1-monostearate	3-MCPD-1-18:0
8952.21-100-ME	3-Chloro-1,2-propandiol-1-monooleate	3-MCPD-1-18:1 (9-cis)
8953.21-100-ME	3-Chloro-1,2-propandiol-1-monolinoleate	3-MCPD-1-18:2 (9,12-dicis)
8954.23-100-ME	3-Chloro-1,2-propandiol-1-monoarachidate	3-MCPD-1-20:0
8955.23-100-ME	3-Chloro-1,2-propandiol-1-monogadolenate	3-MCPD-1-20:1 (11-cis)
8956.25-100-ME	3-Chloro-1,2-propandiol-1-monobehenate	3-MCPD-1-22:0
8957.25-100-ME	3-Chloro-1,2-propandiol-1-monoerucidate	3-MCPD-1-22:1 (13-cis)

	Labelled Glycidyl fatty acid esters	
9924.19-10MG	Glycidyl palmitate-d31	glycidyl C16:0-d31

Due to the great number of 3-MCPD mono- or di-esters often total 3-MCPD (the underlying alcohol component of all 3-MCPD-esters) is determined by GC-MS. After hydrolysis of the ester the free alcohol can be analysed by GC-MS after being transferred to volatile derivatives using heptafluorobutyrylimidazole, acetone or phenylboronic acid. Chiron provides this volatile derivatives of 3-MCPD.

Chiron No.	Product	Description
	<i>Volatile 3-MCPD derivatives for GC-MS</i>	1000 µg/mL in methanol
8616.11-K-ME	3-Chloropropane-1,2-di(heptafluoro)butyrate	1000 µg/mL in methanol
8617.6-K-ME	4-Chloromethyl-2,2-dimethyl-1,3-dioxolane	1000 µg/mL in methanol
8618.9-K-ME	4-Chloromethyl-2-phenyl-1,3-dioxa-2-borolane	1000 µg/mL in methanol
9343.6-K-ME	(S)-(-)-3-Chloro-1,2-propandiol acetonoid	1000 µg/mL in methanol
9340.3-K-ME	Glycerol-d5	1000 µg/mL in methanol

Acrylamide occurs in many processed starchy foods and is of concern as a possible carcinogen. It was first discovered in food in 2002 and its formation is highly temperature dependent.

Chiron No.	Product	Description
	<i>Acrylamide and metabolites</i>	
3875.3-1G	Acrylamide	1 g neat
3876.3-100-ME	Acrylamide-d3	100 µg/mL in methanol
9454.3-100-ME	Acrylamide-d5	100 µg/mL in methanol
8103.3-100-ME	Acrylamide-1-13C	100 µg/mL in methanol
9986.3-10MG	Glycidamide	10 mg neat
9987.8-100-ME	N-Acetyl-(S)-(carbamoylethyl-d4)-L-cysteine	100 µg/mL in methanol

Furan can be formed from carbohydrates, amino acids and ascorbic acid during food processing. The major precursor is reported to be ascorbic acid which is transformed to furan.

	<i>Furan</i>	
3877.4-1G	Furan	1g neat
3878.4-100-ME	Furan-d4	100 µg/mL in methanol

Stigmastadienes are formed by processing of olive and other vegetable oils. The ISO method 15788-2:2006 describes the analysis for the determination of stigmastadienes in vegetable oils by HPLC.

	<i>Stigmastadienes Calibrant Solutions</i>	.
0678.27-K-BM	Δ3,5-Cholestadiene Stock solution	1000 µg/mL in tert-butyl methyl ether
0678.27-10-MX	Δ3,5-Cholestadiene External standard solution	10 µg/mL in acetonitrile/tert-butyl methyl ether 1:1
0678.27-2-PT	Δ3,5-Cholestadiene Internal standard solution	2 µg/mL in petroleum ether
0622.27-K-IO	<i>aaa</i> -(20R)-Cholestan Standard solution	1000 µg/mL in isoctane

Food packaging contaminants

Recycled fibres

It has been shown that recycled fibres may contain considerable amounts of diisopropylnaphthalene, diisobutylphthalate and benzophenone. 2,3,5-Trimethylnaphthalene has been applied as internal standard.

2102.16-10MG	Diisobutyl phthalate	DIBP	10 mg neat or 1000 µg/mL in isoctane
1126.16-K-IO	2,6-Diisopropylnaphthalene	DIPN	1000 µg/mL in isoctane
2748.13-1G	Benzophenone		1 g neat
0706.13-500-IO	2,3,5-Trimethylnaphthalene	2,3,5-TMN	500 µg/mL in isoctane

Plasticizers, phthalates and adipates

There are EU-regulations on the content of plasticizers in food as a result of food packaging. Despite of these regulations, high concentrations (with a mean over 200ppm) of plasticizers have been found in the gaskets of lids of food-jars.

1225.12	Diethyl phthalate	DEPH	Available as neat material or isoctane-solution
3049.28	Di-iso-decyl phthalate in mixture with C9-11-branched alkyl o-phthalate, C10 rich	DIDP	Available as neat material or isoctane-solution
9916.26	Di-iso-nonyl phthalate in mixture with C8-10-branched alkyl o-phthalate , C9-rich	DINP	Available as neat material or isoctane-solution
9917.26	Di-iso-nonyl phthalate (C9-alkyl ester isomer mix, mainly one isomer)	DINP	Available as neat material or isoctane-solution
1224.24	Bis(2-ethylhexyl) phthalate	DEHA	Available as neat material or isoctane-solution
8537.16	n-Butyl iso-butyl phthalate (n-Butyl 2-methylpropyl phthalate)		Available as neat material or isoctane-solution
9754.17	n-Butyl n-pentyl phthalate		Available as neat material or isoctane-solution
8539.18	n-Pentyl iso-pentyl phthalate (n-Pentyl 3-methylbutyl phthalate)		Available as neat material or isoctane-solution
9758.20	Iso-pentyl benzyl phthalate (3-Methylbutyl benzyl phthalate)		Available as neat material or isoctane-solution

See BMF 32 (page 44) for a complete list of available phthalates and adipates and BMF 50 (page 48) for Mixed Phthalates.

2-Ethylhexanoic acid

2-Ethylhexanoic acid (EHA) is widely used in the technical sector as an intermediate for production of paint additives, thickening agents for fuel, stabilizers for silicones etc. 2-Ethylhexanoic acid, defined as an hazardous substance, have been found in baby food and fruit juices filled in glass bottles with twist-off lids.

3879.8-K-ME	2-Ethylhexanoic acid	1000 µg/mL in methanol, 1 mL
3880.8-K-ME	2-Ethylhexanoic acid-d15	1000 µg/mL in methanol, 1 mL

Ethyl carbamate

The World Health Organization (WHO) has officially labelled ethyl carbamate, a compound produced during yeast fermentation, as a Group 2A carcinogen, ranking it alongside other substances likely to cause cancer in humans.

3885.3-100MG	Ethyl carbamate	100 mg neat
--------------	-----------------	-------------

Semicarbazide (SEM)

Semicarbazide is a metabolite of nitrofurazone (agricultural drug forbidden in Europe) and is formed by thermal breakdown of azodicarbonamide. The analysis is performed by the transformation to 2-nitrobenzaldehyde.

3881.7-1G	2-Nitrobenzaldehyde	1 g neat
3882.1-100MG	Semicarbazide HCl	100 mg neat
3883.2.100MG	Azodicarbonamide	100 mg neat
3884.6-100MG	Nitrofurazone	100 mg neat

ITX, Thioxanthones

Italian authorities have detected baby milk cartons containing Isopropylthioxanthone (ITX). ITX is used in printing inks on milk and fruit juice cartons. ITX is a mixture of two isomers to which US EPA has given a high hazard ranking for environmental effects.

2723.16-100-IO	1,3,4-d3-2-Isopropylthioxanthone	2-ITX-d3	100 µg/mL in isoctane, 1mL
2723.16-10MG	1,3,4-d3-2-Isopropylthioxanthone	2-ITX-d3	10 mg neat
2722.16-K-IO	2-Isopropylthioxanthone	2-ITX	1000 µg/mL in isoctane, 1 mL
2722.16-10MG	2-Isopropylthioxanthone	2-ITX	10 mg neat
2726.16-K-IO	4-Isopropylthioxanthone	4-ITX	1000 µg/mL in isoctane, 1 mL
2726.16-10MG	4-Isopropylthioxanthone	4-ITX	10mg neat
3583.13-K-IO	Thioxanthone		1000 µg/mL in isoctane, 1 mL
3586.10-K-IO	6-Methylthiochroman-4-one		1000 µg/mL in isoctane, 1 mL
3587.13-K-IO	2-Chlorothioxanthone		1000 µg/mL in isoctane, 1 mL
3584.17-K-IO	2,4-Diethylthioxanthone	2,4-DETX	1000 µg/mL in isoctane, 1 mL
3585.30-10MG	Thioxanthone-64		10 mg neat
	Xanthones		
8018.13-K-IO	Xanthone		1000 µg/mL in isoctane, 1 mL

Environmental contaminants in food

PCFs (Perfluorinated compounds) including P-PHOS and PFOA: BMF 20

PCBs: BMF 14

PBDEs, and other Flame retardants: BMF 15

Pesticides: BMF 33 and 34, also see the Chiron 2008 catalogue pages 267-372, available at www.chiron.no

BMF 31 - Food Safety III

Food Colours and Food Aroma

Chiron has built up a strong track record of supplying new reference standards during the past 30 years of operation. We are now proud to announce our offer of Food Colour and Food Aroma reference materials.

Food Colours

Carotenoids, Chlorophylls, Synthetic colours

Food Aroma

Taste and Flavours

Food Aroma (Taste and Flavours)

Following reference materials are delivered as 100ug/mL (100) or 1000ug/mL (K) in methanol (ME), toluene (T), acetonitrile (AN) or isoctane (IO).

	Caffeine	Caffeine impurities:	Delivered as:
2517.8-K-ME	Caffeine		1000ug/mL in Methanol
2517.8-500MG	Caffeine		500mg neat

8346.27-1G	Patent Blue VF	C.I.42045	1g neat

BMF 17 - Isopropylthioxanthone (ITX)

November 2005: Baby milk scare

Italian authorities are seizing baby milk cartons across the country. The alarm was raised after traces of the chemical **Isopropylthioxanthone (ITX)** was found in infant formula, leading to product recalls in France, Spain, Portugal and Italy.

The chemical ITX had been used during the printing processes of the packaging of the baby milk samples in Italy, and was found during a routine analysis. The packaging was manufactured by a Swedish owned company, who has since vowed to seize the use of ITX by January 2006.

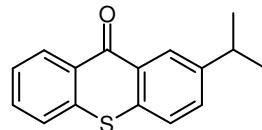

ITX is a mixture of two isomers to which the US EPA has given a high hazard ranking for environmental effects. The 2-isomer is the dominant ingredient. The European Food Safety Authority (EFSA) has recently undertaken a risk assessment on ITX:

<http://www.efsa.europa.eu/en/efsajournal/pub/293.htm>.

Reference standard

2722.16 **2-Isopropylthioxanthone (99+%)**
 [CAS 5495-84-1]
 1.0 mg/mL, 1.1 mL in isoctane or 10mg neat

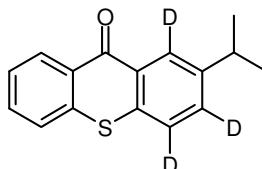

2726.16 **4-Isopropylthioxanthone (99+%)**
 [CAS 83846-86-0]
 1.0 mg/mL, 1.1 mL in isoctane or 10mg neat

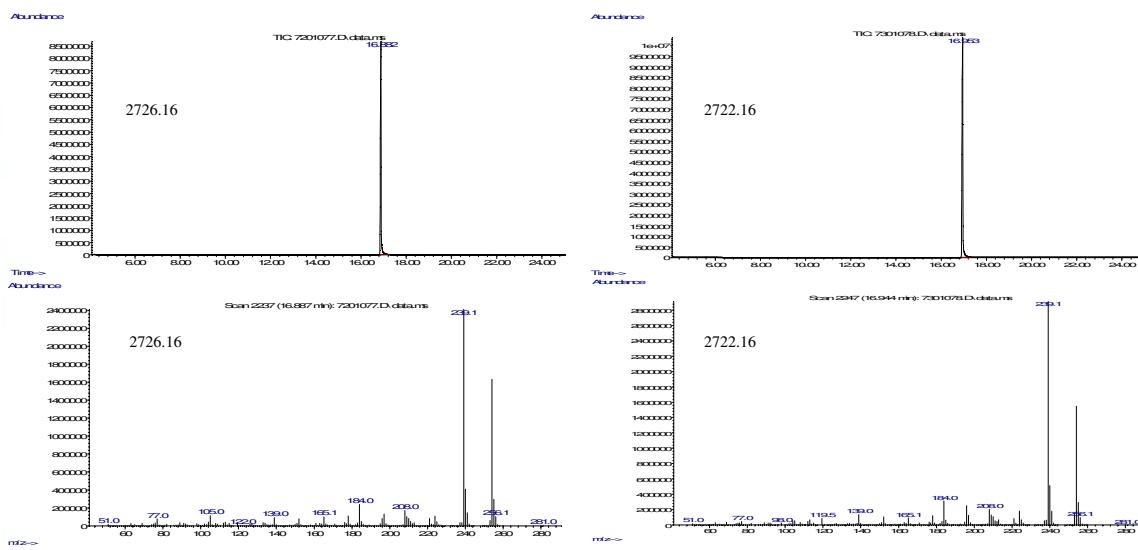

Internal standard

2723.16 **1,3,4-d₃-2-Isopropylthioxanthone (98+%)**
 100 µg/mL, 1.1 mL in isoctane
 10mg neat

For more details, please contact inquire.

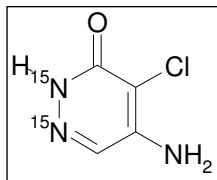

Below you'll find GC chromatogram and mass spectra of 2726.16 and 2722.16, respectively.

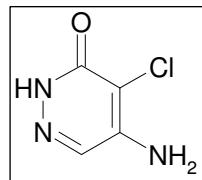

BMF 33 - Desphenylchloridazon-¹⁵N₂

Desphenylchloridazon (desphenylpyrazon) is an important metabolite of the pesticide chloridazon (pyrazon) and is found in drinking water.

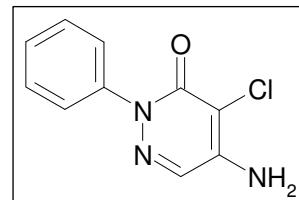

Isotope labelled and native desphenylchloridazon is now available from Chiron AS.

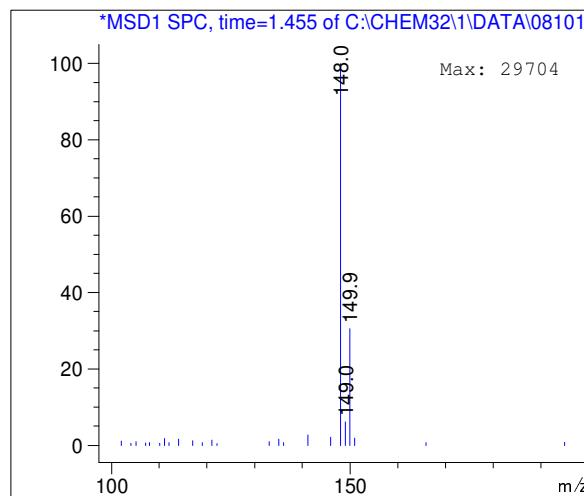

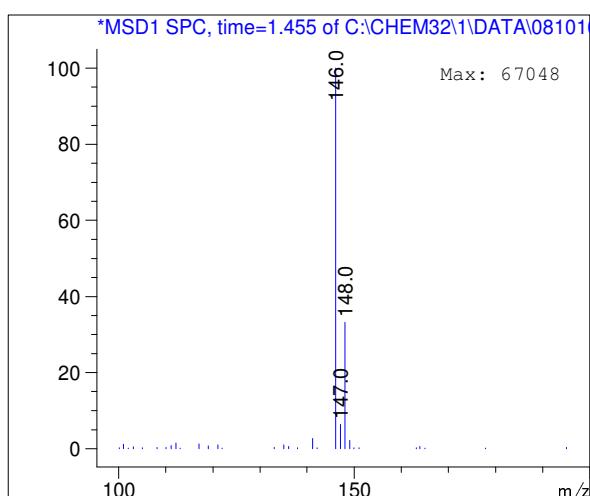

8399.4
Desphenylchloridazon-¹⁵N₂

8421.4
Desphenylchloridazon

8423.10
Chloridazon

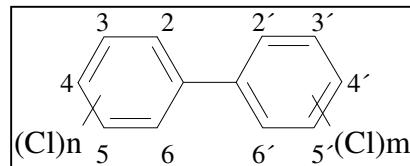

Mass spectra of 8421.4 (left panel) and 8399.4 (right panel) obtained from LC-MS, positive chemical ionization mode.

Choridazones (Pyrazones)

Chloridazon (Pyrazon)	8423.10-100-AN	100 ug/mL in acetonitrile*
	8423.10-10MG	10 mg
	8423.10-100MG	100 mg
Desphenylchloridazon	8421.4-100-AN	100 ug/mL in acetonitrile*
	8421.4-5MG	5 mg
	8421.4-10MG	10 mg
Desphenylchloridazon- ¹⁵ N ₂	8399.4-100-AN	100 ug/mL in acetonitrile*
	8399.4-5MG	5 mg
	8399.4-10MG	10 mg
Chloridazon Kit	8788.3	* One of each

BMF 14 - Polychlorinated biphenyls (PCBs)

Polychlorinated biphenyls (PCBs) have been the subject of a broad range of studies and investigations because of their environmental persistency and bioaccumulation. Their abundance as pollutants stems from their worldwide manufacture as heavy-used industrial chemicals, *e.g.* Aroclors with the main application as dielectric fluid in capacitors and transformators. PCBs are formed as mixtures by the addition of chlorine to biphenyl.

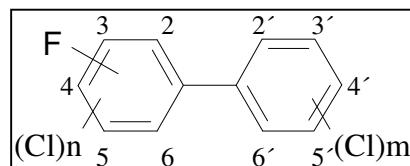

PCB congeners can be classified as coplanar, dioxinlike with none or one orthosubstitution and non-planar with substitutions in the *ortho*-positions. The coplaner PCBs shows a similar toxicity as the dibenzofurans and the dioxins.

F-PCBs®, An overview of advantages

F-PCBs® Fluorinated Internal Standards for PCB analysis - A flexible and cost-efficient alternative:

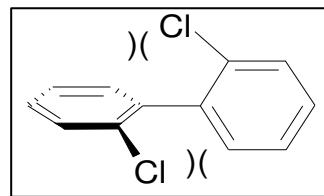

Mono- and difluorinated PCBs are closely similar to the parent PCBs in terms of physico-chemical properties, and are ideal internal or surrogate standards for GC-MS, GC-ECD, GC-FID and two-dimentional GC. The F-PCB® internal standards offered by Chiron have several advantages over the more traditionally used ^{13}C isotopes and unlabelled internal standards:

- Cost efficient. Much cheaper than the ^{13}C isotopes.
- Gives one single, pure isotope (F has only one isotope)
- Can be used with GC-ECD detection, ^{13}C can not since they coelute with the native.
- Do not discriminate from the native upon work-up.
- “Designer retention times” (*ortho*-, *meta*-, *para*-F) possible for optimal elution rate.

Native Non-coplanar PCBs: “Dutch Seven PCBs”

IUPAC No.	Compound	Cat. No.	Cat. No. neat

BMF 15 - Polybrominated Diphenylethers (PBDEs) and other flame retardants

PBDEs have been used as flame retardants over the past two decades, and are globally distributed in the environment. PBDEs accumulate in the food chain and there is a strong concern about the health effects of PBDE exposure.

Native PBDEs

Chiron offers single native PBDEs in solution for analytical purposes and as neat material up to gram quantities for toxicological studies. Mixtures are offered according to international methods **and on request**.

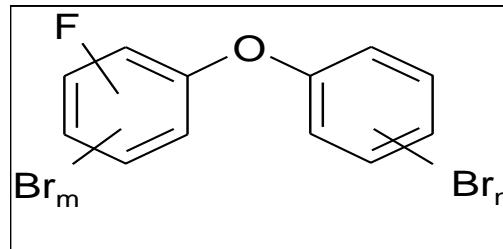

F-PBDEs® Internal standards: An overview of advantages

F-PBDEs® Fluorinated Internal Standards for PBDE analysis are flexible and cost-efficient

Mono- and difluorinated PBDEs are closely similar to the parent PBDEs in terms of physico-chemical properties, and are ideal internal or surrogate standards for GC-MS, GC-ECD, GC-FID and twodimentional GC.

The F-PBDE® internal standards offered by Chiron have several advantages over the more traditionally used ^{13}C isotopes and unlabelled internal standards:

- Cost-efficient. Much cheaper than the ^{13}C isotopes. Useful with electron impact ionization and negative ion chemical ionization.
- Gives one single, pure isotope (F has only one isotope)
- Can be used with GC-ECD detection, ^{13}C can not since they coelute with the native.
- Do not discriminate from the native upon work-up.
- “Designer retention times” (*ortho*-, *meta*-, *para*-F) possible for optimal elution rate.

ISO 22032: 2006

Water quality – Determination of selected polybrominated diphenyl ethers in sediments and sewage sludge – Method using extraction and gas chromatography/mass spectrometry.

All HaloPAHs are available as single solutions from Chiron, different concentrations and solvents are possible. Please inquire for an offer.

BMF 10 - Polychlorinated alkanes (SCCP)

Applications

Polychloro-*n*-alkanes (PCAs) or chlorinated paraffins are a class of industrial chemicals used as high-temperature lubricants in metal-working machinery and as flame retardant plasticizers in vinyl plastics. Less common applications include the use as flame retardants in rubber, paints, adhesives and as sealants.

"SCCP", "MCCP", "LCCP"

Industrially, the PCAs are synthesized by direct chlorination of *n*-alkane feedstock with molecular chlorine at elevated temperatures and pressures, and sometimes in the presence of UV-light. PCAs fall into three categories, C₁₀-C₁₃ (short, "SCCP"), C₁₄-C₁₇ (medium, "MCCP"), and C₁₈-C₃₀ (long, "LCCP"). They are further sub-categorized into their weight content of chlorine, 40-50%, 50-60% and 60-70%.

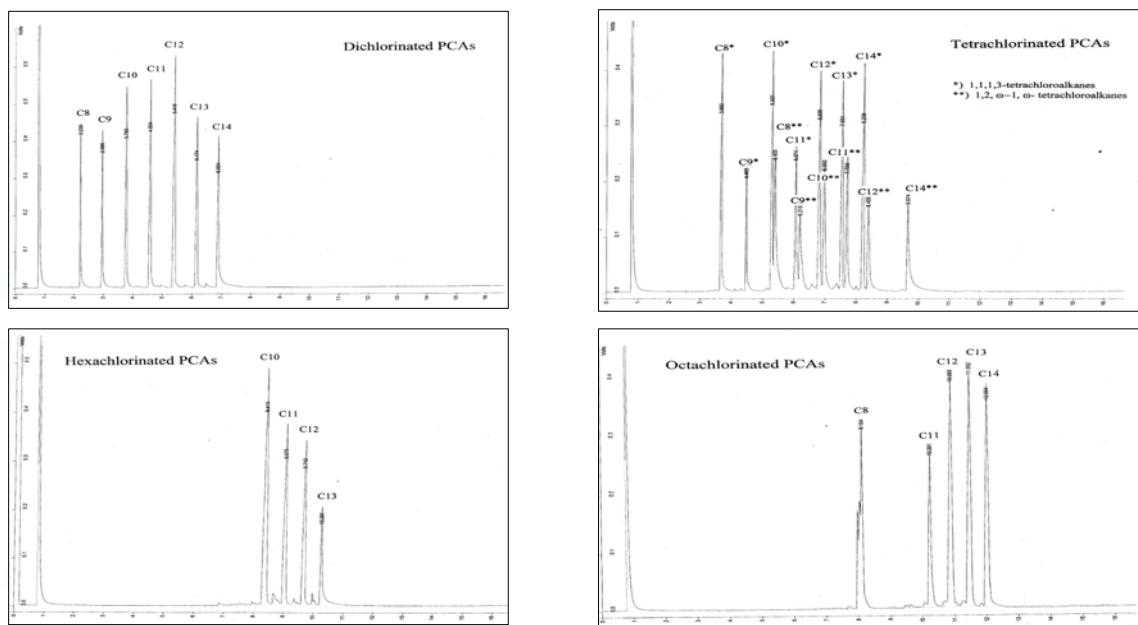

C₁₀-C₁₃ PCA ("SCCPs" short-chain-chlorinated-paraffines): Listed as Priority Pollutants in the US, Canada, and Europe

In the US, C₁₀-C₁₃ PCAs have been placed on the US Environmental Protection Agency (EPA) Toxic Release Inventory, in Canada they are classified as "Track 1" Priority Toxic substances under the Canadian Environmental Protection Act, and in Europe the C₁₀-C₁₃ PCAs are included on the list of priority substances in the field of water policy submitted by the Commission of European Communities for the European Parliament and Council Decision.

Analysis of PCAs

PCAs are analyzed by GC using ECD detector, or more sophisticated by high resolution gas chromatography/electron capture negative ion-mass spectrometry (HRGC/ECNI-MS).

Chiron offers a broad range of single polychlorinated PCAs as reference materials. They are useful in the quantification and as standards for PCA determination, for dividing PCAs into various classes according to carbon length and chlorine content. PCAs are C₈-C₂₀ alkanes with a chlorine weight content of 27-73%.

PCAs according to their carbon chain length

Cat. No.	Compound	Molecular formula	% Weight of Cl
C8-C9 PCAs			
1664.8-K-IO	1,2-Dichlorooctane	C ₈ H ₁₆ Cl ₂	38,7
1660.8-K-IO	1,1,1,3-Tetrachlorooctane	C ₈ H ₁₄ Cl ₄	56,3

BMF 20 - Perfluorinated Organic Compounds

Perfluorinated Organic Compounds (PFCs) are used in numerous commercial products like fire protection agents, textile protection agents, floor polishers, detergents, paints, paper treatment agents and electronic equipment.

The first PFAs (PFCs = Perfluorinated alkanoic acids, alcohols and sulfonic acids) were based on Perfluoroctanesulfonic Acid (PFOS) and Perfluorooctanoic Acid (PFOA). However, due to environmental reports with warning about the bioaccumulation of these compounds, new and more readily biodegradable substances have been introduced. Typically, these are various telomeric acids, alcohols and sulfonamides.

The biodegradation-route of the commercial telomers is currently under investigation and new metabolites are likely to be found. Chiron now offers a large range of PFCs and its telomeric acid, alcohols and possible metabolites.

PFAs - Perfluorinated alkanoic acids and alcohols

PFA Sulfonic acids:	2041.4-50-ME	Perfluorobutane sulfonic acid	PFBS
	2719.4-50-ME	Perfluorobutane sulphonate, potassium salt	PFBS-K
	8581.6-50-ME	Perfluorohexane sulfonic acid, potassium salt	PFHxS-K
	2037.8-50-ME	Perfluorooctane sulfonic acid	PFOS
	2193.8-50-ME	Perfluorooctane sulfonic acid, potassium salt	PFOS-K
	8012.8-100MG	Perfluorooctane sulfonylfluoride	
	2192.8-50-ME	Perfluoro-4-ethylcyclohexane sulfonic acid, potassium salt	
Telomeric PFA Sulfonic acid:	2559.8-50-ME	1 <i>H</i> ,1 <i>H</i> ,2 <i>H</i> ,2 <i>H</i> -Perfluorooctane sulfonic acid	
PFA Sulfonamides:	2043.8-50-AN	Perfluorooctane sulfonamide	FOSA
PFA Acids:	2190.3-50-ME	Perfluoropropionic acid, sodium salt	PFPrA-Na
	2810.4-50-ME	Perfluorobutyric acid	PFBA
	2189.4-50-ME	Perfluorobutyric acid, sodium salt	PBBA-Na
	2834.5-50-ME	5 <i>H</i> -Perfluoropentanoic acid	5 <i>H</i> PFPA
	2819.5-50-ME	<i>n</i> -Perfluoropentanoic acid	PFPA
	2590.6-50-ME	Perfluorohexanoic acid	PFHxA
	2820.7-50-ME	Perfluorocyclohexanoic acid	PFCyHxA
	2835.7-50-ME	7 <i>H</i> -Perfluoroheptanoic acid	7 <i>H</i> PFHPA
	2821.7-50-ME	<i>n</i> -Perfluoroheptanoic acid	PFHpA
	2042.8-50-ME	<i>n</i> -Perfluorooctanoic acid	PFOA
	2822.8-50-ME	<i>n</i> -Perfluorooctanoic acid, ammonium salt	PFOA-NH4
	2191.8-50-ME	Perfluorooctanoic acid, sodium salt	PFOA-Na
	2836.9-50-ME	9 <i>H</i> -Perfluorononanoic acid	9 <i>H</i> PFNA
	2715.9-50-ME	Perfluorononanoic acid	PFNA
	2823.10-50-ME	<i>n</i> -Perfluorodecanoic acid	PFDA
	2824.10-50-ME	Perfluoro-3,7-dimethyloctanoic acid	PF3,7DiMeOA
	2825.11-50-ME	11 <i>H</i> -Perfluoroundecanoic acid	11 <i>H</i> PFUndA
	2874.11-50-ME	Perfluoroundecanoic acid	PFUndA
	2826.12-50-ME	<i>n</i> -Perfluorododecanoic acid	PFDoDA
	2827.14-50-ME	Perfluorotetradecanoic acid	PFTeDA
	2828.16-50-ME	Perfluorohexadecanoic acid	PFHxdA
	2829.18-50-ME	Perfluorooctadecanoic acid	PFoDA
Telomeric acids :	2830.6-50-ME	2 <i>H</i> ,2 <i>H</i> ,3 <i>H</i> ,3 <i>H</i> -Perfluorohexanoic acid	3:3 FTCA
	2831.9-50-ME	2 <i>H</i> ,2 <i>H</i> ,3 <i>H</i> ,3 <i>H</i> -Perfluorononanoic acid	6:3 FTCA
	2832.9-50-ME	1 <i>H</i> ,1 <i>H</i> -Perfluoro-3,5,5-trimethylhexanoic acid	3,5,5-TriMe 5:1

	3748.18-100-ME	9,10,12,13-Tetrachlorooctadecanoic acid	

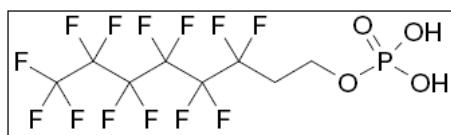

BMF 54 - PAPS

Telomeric 6:2, 8:2 and 10:2 mono-, di- and tri-polyfluoroalkyl phosphate esters

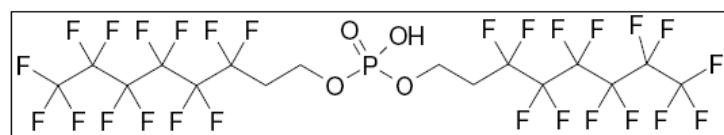

It is recommended that the EU member states (recommendation 2010/161/EU, 17 March 2010) carry out the analysis of perfluoro-alkylated substances including PERFLUOROPHOSPHATE SURFACTANTS such as 8:2 mono-PAPS and 8:2 di-PAPS in order to relevance their presence in food.

Chiron has developed the first series of telomeric PAPS as reference standards, as well as internal standards:

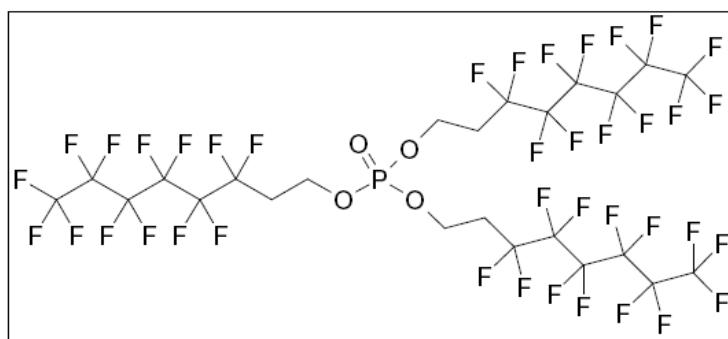

6:2 Mono-PAPS

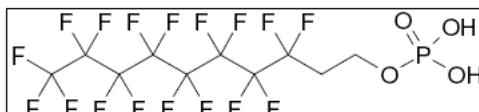

6:2 Di-PAPS

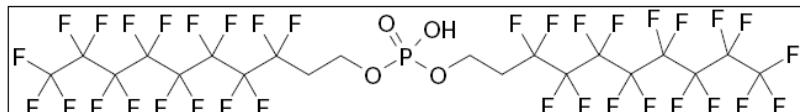

6:2 Tri-PAPS

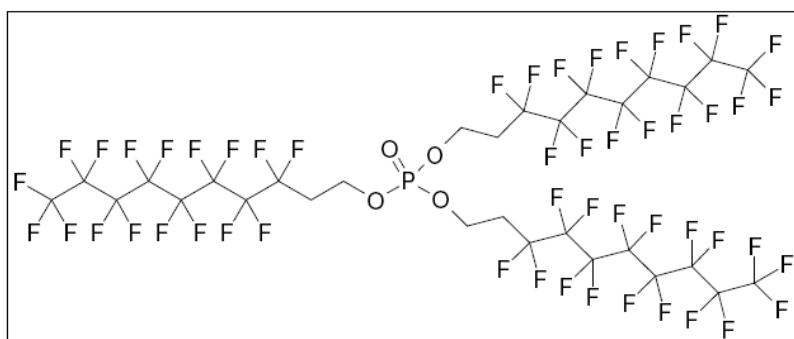

8:2 Mono-PAPS

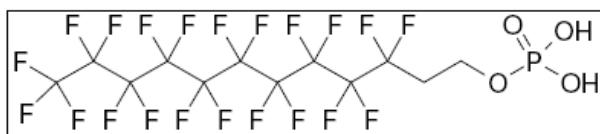

8:2 Di-PAPS

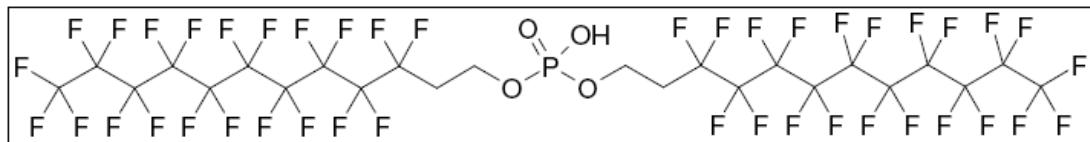

8:2 Tri-PAPS

10:2 Mono-PAPS

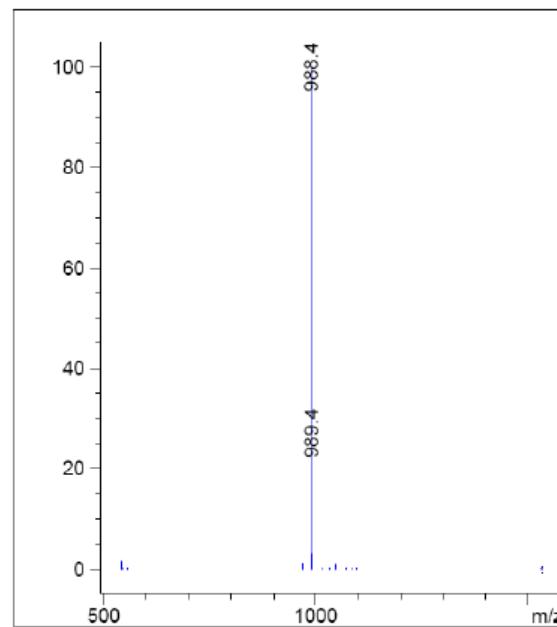

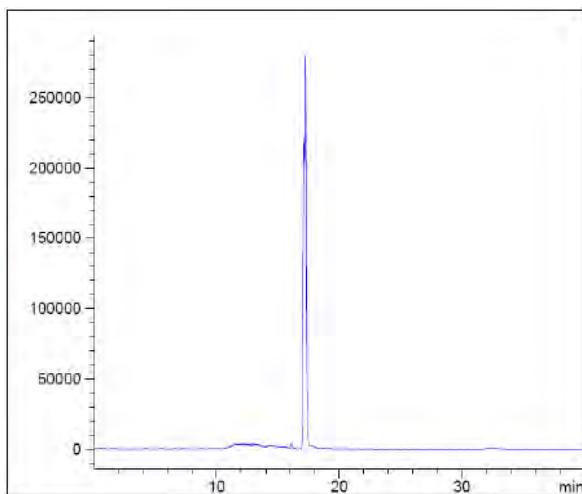

10:2 Di-PAPS

All native PAPS are available as neat (50 µg and 10 mg). All labeled PAPs are available as neat (50 µg and 5 mg). 50µg quantities can be used as qualitative standard. Please inquire.

Chiron No.	Native PAPs	Chiron No.	Internal Standards
9563.8	6:2 Mono-PAPS		
9564.16	6:2 Di-PAPS	9928.16	6:2 Di-PAPS-d4
9565.24	6:2 Tri-PAPS		
9391.10	8:2 Mono-PAPS		
9392.20	8:2 Di-PAPS	9929.20	8:2 Di-PAPS-d4
9394.30	8:2 Tri-PAPS

BMF 32 - Plasticizers: Phthalates and Adipates

Phthalate and adipate esters are widely used as surfactants and in food and personal care products as plasticizers. Phthalates and adipates are also found in food as a result of leakage into food containers. Chiron offers a wide range of analytically pure deuterated and native phthalates and adipates, as well as mixes. Custom made mixes are available on request.

Metabolites: Phthalate biomarkers

It has been shown that dialkylphthalates are metabolized in the body to endocrine-active monoalkyl-phthalates, and appears to be linked with the prevalence of abdominal obesity and insulin resistance in men.

General information

Neat Compounds: Most of the compounds are also available in neat form. Please inquire for an offer.

Custom solutions: Please inquire for custom solution of the plasticizers. Please inquire if you have need for others. Other labelled plasticizers are available upon request (deuterium or ^{13}C). Description of pr. no.: iso-octane (IO), isopropanol (IP), n-hexane (HX), mixture of solvents (MX).

Standard Mixtures

This is a selection of our phthalate containing mixtures, please inquire for other variations or for custom mixes.

Surfactants Mixture 1 7 Analytes, each 1000µg/mL in isoctane

S-4002

1225.12	Diethyl phthalate	DEP
1228.22	Bis(2-ethylhexyl) adipate	BEHA
1223.24	Di-n-octyl phthalate	DNOP
1227.19	Benzyl butyl phthalate	BBP
1224.24	Bis(2-ethylhexyl) phthalate	BEHP
9916.26	Di-iso-nonyl phthalate in mixture with C8-10-branched alkyl o-phthalate , C9-rich	DINP
1226.16	Di-n-butyl phthalate	DBP

Surfactant Mixture 2 Each 100µg/mL in toluene

S-4074

1224.24	Bis(2-ethylhexyl) phthalate	BEHP
1223.24	Di-n-octyl phthalate	DNOP

EPA 606 Phthalate Esters in Waste Water by GC-ECD 2000µg/mL in hexane

S-4233

1224.24	Bis(2-ethylhexyl) phthalate	BEHP
1227.19	Benzyl butyl phthalate	BBP
1226.16	Di-n-butyl phthalate	DBP
1225.12	Diethyl phthalate	DEP
2094.10	Dimethyl phthalate	DMP
1223.24	Di-n-octyl phthalate	DNOP

EPA 606 Control Sample Mixture 6 Analytes in acetone

S-4234

1224.4	Bis(2-ethylhexyl) phthalate	BEHP	500µL/mL
1227.19	Benzyl butyl phthalate	BBP	100µL/mL
1226.16	Di-n-butyl phthalate	DBP	250µL/mL
1225.12	Diethyl phthalate	DEP	250µL/mL
2094.10	Dimethyl phthalate	DMP	250µL/mL
1223.24	Di-n-octyl phthalate	DNOP	500µL/mL

Biomarker Focus 50 - Mixed phthalates

Butyl isobutyl phthalate, Petyl isopentyl phthalate, Butyl benzyl phthalate

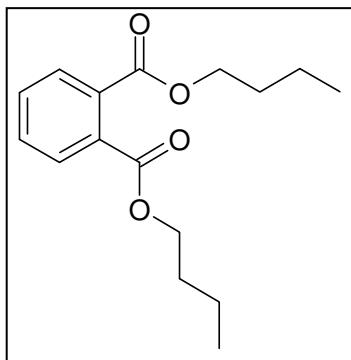

Certain phthalates are now listed on the CANDIDATE LIST OF SUBSTANCES OF VERY HIGH CONCERN FOR AUTHORIZATION by ECHA, the European Chemicals Agency:

- Dibutyl phthalate
- Diisobutyl phthalate
- Benzyl butyl phthalate
- Bis(2-ethylhexyl) phthalate
- Bis(2-methoxyethyl)phthalate

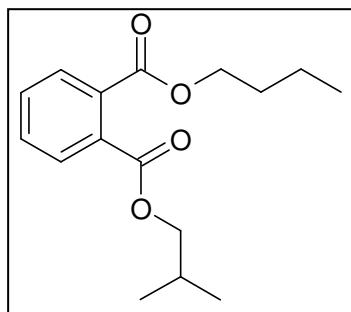

UNIQUE in-house proprietary technology enables Chiron to offer pure mixed phthalate-esters in sufficient quantities for toxicological and analytical purposes. In contrary to traditional synthesis methods were transesterification is a problem, the new method enables us to synthesize these esters in pure separated isomeric forms.

Chiron AS now offers highly purified mixed phthalates:

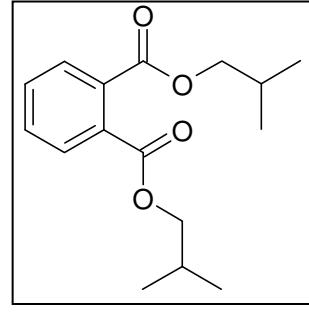

Butyl- / Isobutyl phthalates

1226.16 Di-*n*-butyl phthalate

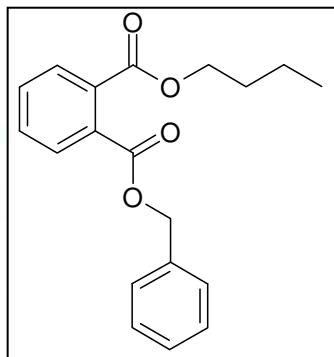

8537.16 *n*-Butyl *iso*-butyl phthalate

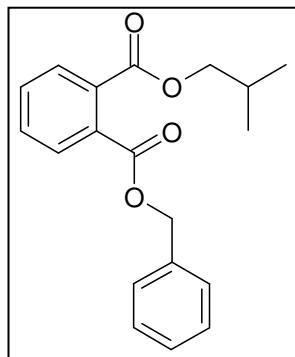

2102.16 Di-*iso*-butyl phthalate

9361.3 Butyl- /Isobutyl phthalate Kit (1226.16 + 8537.16 + 2102.16)

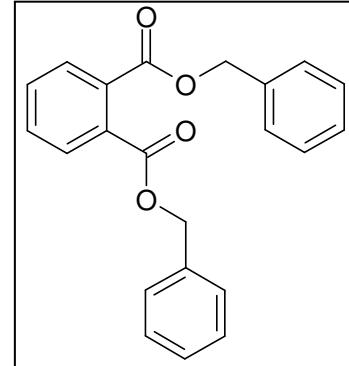

Butyl- / Benzyl phthalates

1227.19 *n*-Butylbenzyl phthalate

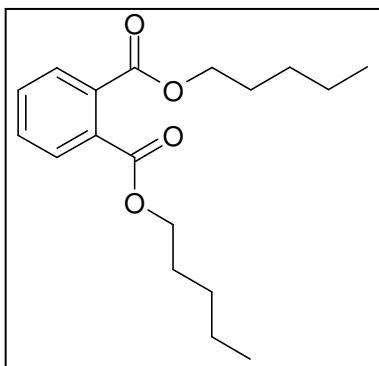

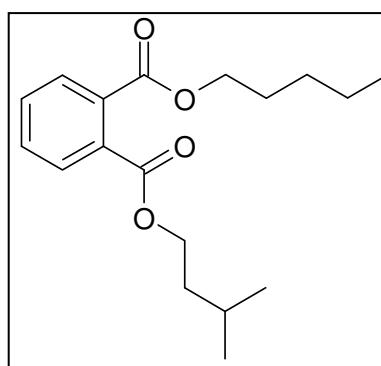

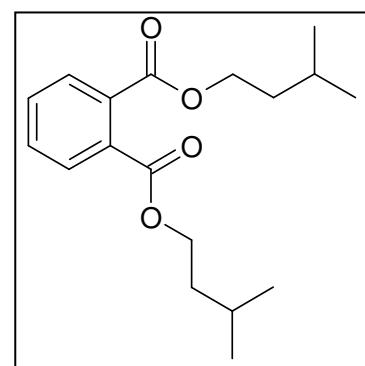

9360.19 *Iso*-butyl benzyl phthalate

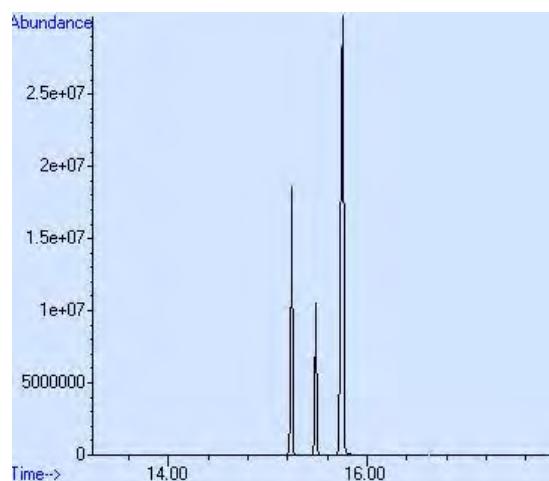

2054.22 Dibenzyl phthalate

9363.3 Butyl- /Benzyl phthalate Kit (1227.19 + 9360.19 + 2054.22)

Pentyl- / Isopentyl phthalates

2099.18 Di-*n*-pentyl phthalate8539.18 *n*-Pentyl *iso*-pentyl phthalate8425.18 Di-*iso*-pentyl phthalate

9362.3 Pentyl- /Isopentyl phthalate Kit (2099.18 + 8539.18 + 8425.18)

GC of 2099.18 , 8539.18 and 8425.18 (Kit 9362.3)

These standards are available from Chiron AS as 100µg/mL and 1000µg/mL in isoctane (1mL). Neat material is available on request.

BMF 40 - Priority PAHs

Polycyclic aromatic hydrocarbons (PAHs) occur in oil, coal, and tar deposits, and are found as pollution in air, water and soil. Amongst the PAHs are some of the most toxic compounds known. Some of the PAHs are known to be carcinogenic, mutagenic, and teratogenic (linked to birth defects). Because of their wide distribution, it is therefore important to monitor these compounds.^{1,2}

PAHs are by-products of fuel from burning, both fossil fuel and biomass. Incomplete combustion that leads to formation of PAHs might also happen in industrial processes, cooking on barbecues, in fires, and in cigarette smoke. PAHs are also present in food. The highest intake is shown to come from cereals, oils, and fats. Smaller amounts come from vegetables and cooked meat.^{1,2}

The toxicity of the PAHs is highly structurally dependent, and isomers may therefore vary from being nontoxic to very toxic. One PAH compound, benzo[a]pyrene is notable for being the first chemical carcinogen to be discovered (and is one of many carcinogens found in cigarette smoke).

PAH compounds of particular toxicological and environmental concern are monitored using internationally recognized methods. The list of priority PAHs varies in different countries. In the United States, the EPA (Environmental Protection Agency) has listed 16 priority PAHs. All of these are available from Chiron as solutions and neat material, in addition to deuterated and fluorinated internal standards. Please inquire for additional information.

16 EPA PAHs: EPA Methods 550.1/610/8100/8270C/8310

Available from Chiron:

Chiron No.	Compound	CAS
0711.10	Naphthalene	[91-20-3]
0002.12	Acenaphthylene	[208-96-8]
0732.12	Acenaphthene	[83-32-9]

0239.20	Benzo[a]pyrene	[50-32-8]
0203.22	Dibenz[a,h]anthracene	[215-58-7]
0222.22	Benzo[ghi]perylene	[191-24-2]
0277.22	Indeno[1,2,3-cd]pyrene	[193-39-5]
0244.24	Dibenzo[a,e]pyrene	[192-65-4]
0242.24	Dibenzo[a,h]pyrene	[189-64-0]
0241.24*	Dibenzo[a,i]pyrene	[189-55-9]
0243.24	Dibenzo[a,l]pyrene	[191-30-0]
0296.19*	5-Methylchrysene	[3697-24-3]
0309.17	Benzo[c]fluorene	[205-12-9]

Available as 10 mg neat or as solution. Different concentrations and solvents are available, please inquire for details. * By default, only available as solution. Please inquire for neat material.

Single 15 EU-PAH Kit (3958.15-KIT) one of each of the 15 priority PAHs, 200µg/mL each in toluene.

Single 15+1 EU PAH Kit (9311.15-KIT) one of each of the 15+1 priority PAHs, 200µg/mL each in toluene.

Single Internal Standards:

Chiron No.	Compound	CAS
1087.18	Benz[a]anthracene-d12	[1718-53-2]
1024.18	Chrysene-d12	[1719-03-5]
1348.20	Benzo[k]fluoranthene-d12	[93951-98-5]
1088.20	Benzo[a]pyrene-d12	[63466-71-7]
1330.22	Dibenz[a,h]anthracene-d14	[13250-98-1]
1089.22	Benzo[ghi]perylene-d12	[93951-66-7]
1531.22	Indeno[1,2,3-cd]pyrene-d12	[203578-33-0]
1529.24	Dibenzo[a,i]pyrene-d14	[158776-07-9]

Available as 10 mg neat or as solution. Different concentrations and solvents are available, please inquire for details.

In addition to the single solutions, Chiron also offers convenient EU PAH all-in-one mixtures, both for native and labelled standards:

Chiron No.	Name	Concentration, Volume, Content*
S-4452-100-T	15 EU PAH Cocktail, 15 Analytes	100µg/mL each, 1mL in toluene
S-4522-100-T	EU Deuterated PAH Cocktail, 8 Analytes	100µg/mL each, 1mL in toluene
S-4589-100-T	15+1 EU PAH Cocktail, 16 Analytes	100µg/mL each, 1mL in toluene

* Please inquire for different quantities.

ISO methods:

ISO 7981.1 and 7981.2: WHO PAHs in drinking water

6 priority PAHs in acetonitrile: S-4062-ASS-5AN

Chiron No.	Compound	CAS	Concentration
0260.16	Fluoranthrene	[206-44-0]	10µg/mL
0277.22	Indeno[1,2,3- <i>cd</i>]pyrene	[193-39-5]	2µg/mL
0263.20	Benzo[<i>b</i>]fluoranthene	[205-99-2]	2µg/mL
0265.20	Benzo[<i>k</i>]fluoranthene	[207-08-9]	2µg/mL
0239.20	Benzo[<i>a</i>]pyrene	[50-32-8]	2µg/mL
0222.22	Benzo[<i>ghi</i>]perylene	[191-24-2]	2µg/mL

ISO 17993: Water quality – 15 PAHs by GC

The PAHs analyzed in this method are identical to the 16 EPA PAHs, but without Acenaphthylene (Product No. 0002.12); 6-Methylchrysene may optionally be included.

S-4473-10-AN: ISO 17993 Multiple Compound Stock Solution
15 analytes, each 10 µg/mL in acetonitrile

Additional and optional compound:

0297.19-10-AN 6-Methylchrysene [1705-85-7]
1 analyte, 10 µg/mL in acetonitrile

ISO 15753: PAHs in animal and vegetable fats and oils

The PAHs analyzed in this method are identical to the 16 EPA PAHs but without Acenaphthylene (Product No. 0002.12):

S-4469-100-T: ISO 15751 Multiple Compound Standard Solution

BMF 57 - PAH METABOLITES

The major source of PAHs is incomplete combustion of organic material like coal, oil or wood. Except of breathing in contaminated air from e.g. cigarette smoke or a fire place, eating food is a significant source of PAHs for humans, too. Exposure to PAHs means always a mixture of PAHs - therefore the dynamics of metabolism are important and dependent on composition of the mixture.

Chiron AS offers a broad selection of PAH Nitro-/Amino- and Hydroxy-/Keto- Metabolites as reference materials. Please inquire for more details (solution, neat).

	PAH Metabolites		Naphthalenes
	Internal standards		Nitronaphthalenes
	Deuterated nitroPAHs	0007.10	1-Nitronaphthalene

BMF 55 - Nitrosamines and Nitramines

Chiron has built up a strong track record of supplying new reference standards during the past 28 years of operation. We are now proud to offer various nitrosamine and nitramine reference standards.

Our mission is to market highly purified calibrates in crystalline as well as standardized solutions for chemical analysis, including internal standards. Your benefits using our standards include:

- Fast turnover time due to excellent service.
- Guaranteed high and consistent quality.
- Bulk quantities available on request.
- Custom solutions and custom synthesis on request.
- We continuously develop new and innovative products.

It is well known that **nitrosamines and nitramines** can be dangerous to human health, animals and plant lives. There are several technologies which release them into the environment.

Nitrosamines are a class of chemical compounds that have received much attention since 1956, when two British scientists, John Barnes and Peter Magee, reported that dimethylnitrosamine produced liver tumors in rats. Nitrosamines are formed by reactions of nitrites and secondary amines (e.g. in proteins) under acidic conditions like gastric milieus. Human beings ingest nitrites from food, esp. fried or grilled meat and vegetables. Disposal of tobacco products also causes a high intake of nitrosamines (mainly N-Nitrosonornicotin).

CO₂ capture causes a huge interest in these days. Solvents used for CO₂ capture are often a mixture of several amines according to the latest developments in this field. These amine compositions are not always known in detail. However, it is known that the amine blends for CO₂ capture are recycled, but as a side reaction/effect a certain percentage of the amines are either degraded or emitted to air. The released amines are often unstable on air, and degrade to toxic substances like nitrosamines and nitramines.

Nitramines

Chiron No.	Name	Appearance	QTY
9813.2-100MG	Dimethylnitramine	neat	100 mg
9812.2-100MG	2-Nitroaminoethanol	neat	100 mg
9907.2-100MG	<i>N</i> -Nitro-2-oxazolidone	neat	100 mg
9912.4-100MG	Diethylnitramine	neat	100 mg
9913.4-100MG	<i>N</i> -Nitropiperazine	neat	100 mg

Native nitrosamines for EPA 621

Chiron No.	Name	Description	Conc.	Solvent	QTY
9004.2-2K-DC	<i>N</i> -Nitrosodimethylamine	NDMA	2000µg/mL	DCM	1mL
9005.3-2K-DC	<i>N</i> -Nitrosomethylmethylethylamine	NMEA	2000µg/mL	DCM	1mL
9006.4-2K-DC	<i>N</i> -Nitrosodiethylamine	NDEA	2000µg/mL	DCM	1mL
9007.6-2K-DC	<i>N</i> -Nitrosodi- <i>n</i> -propylamine	NDPA	2000µg/mL	DCM	1mL
9008.8-2K-DC	<i>N</i> -Nitrosodi- <i>n</i> -butylamine	NDBA	2000µg/mL	DCM	1mL
9009.4-2K-DC	<i>N</i> -Nitrosopyrrolidine	NPYR	2000µg/mL	DCM	1mL
9010.5-2K-DC	<i>N</i> -Nitrosopiperidine	NPIP	2000µg/mL	DCM	1mL

Please inquire for neat material.

Internal standards for EPA 621

BMF 47 - European standard CEN/TC 347/WG 4N 19

24 Suspected allergens in analytical purity

Safe and accurate analysis of priority suspected allergens has been hampered by the lack of pure and reliable standards. Many of the known allergens have only been available as mixtures of isomers or impure compounds, and purities stated by various fine chemical suppliers has proven to be unreliable for most of these substances.

Chiron has purified each individual allergen in order to obtain a reliable standard mixture of the 24 suspected compounds as suggested in the new CEN/TC347/WG 4N 19 method, altogether 26 isomers.

Chiron AS now offers highly purified substances for allergen analysis and toxicological studies, as well as a convenient all-in-one mixture.

24 Suspected Allergens in analytical purity are presented in table below:

Chiron No.	Name	Description	CAS, isomer mix	CAS, pure isomer
9934.14	Amylcinnamic alcohol ^{A,B}	Buxinol	101-85-9	
9086.14	(2E)-Amylcinnamic aldehyde		122-40-7	78605-96-6
9087.8	Anisyl alcohol ^A	4-Methoxybenzyl alcohol		105-13-5
3843.7	Benzyl alcohol			100-51-6
2053.14	Benzyl benzoate			120-51-4
9089.16	(2E)-Benzyl cinnamate		103-41-3	78277-23-3
9091.14	Benzyl salicylate			118-58-1
9092.14	Butylphenyl methylpropional	Lilial	80-54-6	
9094.9	(2E)-Cinnamic alcohol ^A		104-54-1	4407-36-7
9097.9	(2E)-Cinnamic aldehyde		104-55-2	14371-10-9
9100.10	(Z)-Citral (96-97%)	Neral	5392-40-5	106-26-3
9101.10	(E)-Citral	Geranial	5392-40-5	141-27-5
9102.10	Citronellol		106-22-9	
3867.9	Coumarin	1,2-Benzopyrone		91-64-5
3900.10	Eugenol			97-53-0

BMF 49 - 3-Monochloropropanediol esters (3-MCPD esters)

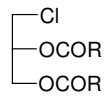

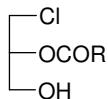

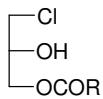

Over the last years, there has been an increase in interest for 3-MCPD fatty acid esters in food analysis. These esters are formed during production and heating of oils and fats, and are considered harmful at a high level of consumption.

3-MCPD is a known carcinogen found as a heat-induced contaminant in many different types of fat-containing foodstuffs. The European Food Safety Authority (EFSA) has defined a limit of 2 μ g/kg body weight as a tolerable daily intake (TDI).

However, in most foodstuffs only a small percentage of 3-MCPD is present as free 3-MCPD, most of it is ester-linked with fatty acids. The 3-MCPD fatty acid esters are assumed to be 100% metabolized to free 3-MCPD by a lipase-catalyzed hydrolysis. They are found to be present in all refined fats and oils, with the highest levels found in palm oil.

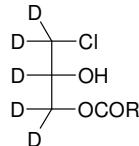

3-MCPD esters are a complex mixture of mono- and diesters linked with different fatty acids. The two different monoesters are often difficult to separate by GC or HPLC.

Types of 3-MCPD esters:

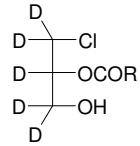

1-Monoesters 2-Monoesters 1,2-Diesters

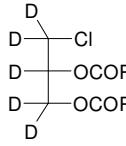

Internal standards:

1-Monoesters

2-Monoesters

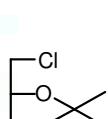

1,2-Diesters

R can be for example C₁₅ (Palmitate), C₁₇ (Stearate), C₂₁ (Behenate), etc.

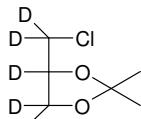

Chiron AS now offers highly purified 1-mono- and diesters, both native and deuterated, for analytical work and for toxicological studies, as well as free 3-MCPD.

Analysis of intact individual 3-MCPD esters can be performed by HPLC or GC/MS. An alternative is to determine the total amount of 3-MCPD, the underlying alcohol-component of all 3-MCPD esters. Volatile derivates for analysis by GC/MS can be achieved by saponification of the ester followed by reaction of the resulting alcohol with acetone, phenylboronic acid, or heptafluorobutyrylimidazole (HFBI). The internal standards can be derivatized in the same manner:

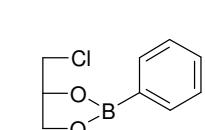

8617.6/
9343.6

Acetone derivative

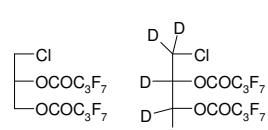

9344.6

8618.9

Phenylboronic acid derivative

8616.11

HFBI derivative

Derivatization with phenylboronic acid is the most commonly used procedure, and is used in a number of official methods for determination of free 3-MCPD. Please inquire if you are interested in this derivatives.

Now available from Chiron AS:

BMF 56 - Glycidyl fatty acid esters

Over the last years, there has been an increase in interest for 3-MCPD fatty acid esters and glycidyl fatty acid esters in food analysis. These esters are formed during production and heating of oils and fats, and are thought to be harmful at a high level of consumption.

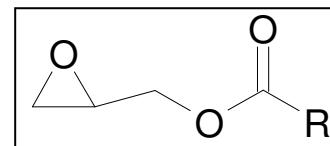

3-MCPD (3-monochloropropane-1,2-diol) is a known carcinogen found as a heat-induced contaminant in many different types of foods. Recently, attention has been given to another group of heat-induced contaminants, 3-MCPD fatty acid esters (bound 3-MCPD) - see our BMF 49.

Glycidyl fatty acid esters are also found in foodstuffs in question. This is a challenge because the method of choice for analysis of 3-MCPD esters is derivatization with phenylboronic acid in NaCl solution. Hereby glycidyl fatty esters are partly degraded to 3-MCPD by opening the epoxide and hydrolysis of the ester. Glycidol derivatives are therefore also detected as 3-MCPD using this method.

In the human body the glycidyl esters are metabolized into free glycidol, a compound that is classified as possibly carcinogenic (group 2 carcinogens) by IARC (International Agency for Research on Cancer).

Chiron AS now offers highly purified glycidyl fatty acid esters for use as reference standards in food analysis, as well as an internal standard and free glycidol!

Glycidyl fatty acid esters		
9674.19-10MG	Glycidyl palmitate	glycidyl C16:0
9896.19-10MG	Glycidyl palmitoleate	glycidyl C16:1 (9-cis)
9899.21-10MG	Glycidyl stearate	glycidyl C18:0
9671.21-10MG	Glycidyl oleate	glycidyl C18:1 (9-cis)
9673.21-10MG	Glycidyl linoleate	glycidyl C18:2 (9-cis, 12-cis)
9672.21-10MG	Glycidyl linolenate	glycidyl C18:3 (6-cis, 9-cis, 12-cis)
9897.23-10MG	Glycidyl arachidate	glycidyl C20:0
9900.23-10MG	Glycidyl gondolenate	glycidyl C20:1 (11-cis)
9898.25-10MG	Glycidyl behenate	glycidyl C22:0
9714.3-10MG	Glycidol	
Internal Standards of Glycidyl fatty acid esters		
9924.19-10MG	Glycidyl palmitate-d31	glycidyl C16:0-d31

Structure of glycidyl fatty acid esters

Chiron AS also offers a wide range of mono-and di-esters of 3-MCPD, including deuterated standards, see BMF 49.

BMF 48 - Melamine-[¹⁵N₃]

Melamine is a trimer of cyanamide with a 1,3,5-triazine skeleton. It contains 66% nitrogen by mass and, if mixed with resins, has fire retardant properties due to release of nitrogen. It is most commonly encountered as melamine resin in combination with formaldehyde, which is a very durable thermosetting plastic used among other things for dinnerware, countertops and cooking spoons.

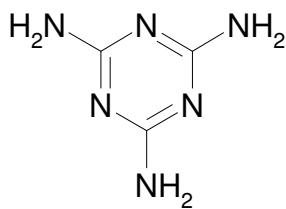

Melamine recently caught the world's attention for another reason - babies in China and pets in the USA became ill after having consumed foodstuffs containing this chemical.

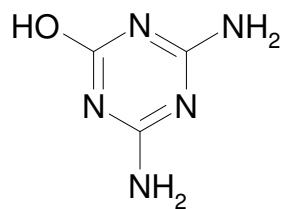

Melamine had been added to low quality pet food and infant formula to make the protein content appear higher than it actually is. Simple protein tests uses nitrogen content as a measure for proteins, and addition of protein-rich compounds like melamine therefore alters the results.

Melamine is relatively non-toxic to humans, but in combination with cyanuric acid it is absorbed into the blood-stream, where they concentrate and interact in the urine-filled renal microtubules. Melamine-cyanurate then crystallize and form large numbers of round, yellow crystals, which block and damage the renal cells that line the tubes, causing the kidneys to malfunction.

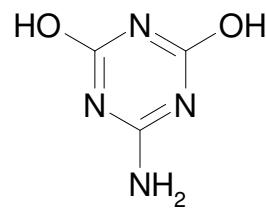

Chiron AS now offers both native and ¹⁵N-labelled melamine for analytical work, as well as the related metabolites like ammeline and ammedine!

Melamine

Ammeline

Ammelide

Chiron No.	Product
2528.3	1,3,5-Triazine-2,4,6-triamine (Melamine)
9797.3	1,3,5-Triazine-2,4,6-triamine-[¹⁵ N ₃] (Melamine-[¹⁵ N ₃])
8735.3	Ammelide
8736.3	Ammeline

Available as 100µg/mL solution in methanol (1mL), 2528.3 also available as neat material.
